# Washington Department of Labor: Long-Range Plan

Our first project with Labor & Industries started as an investigation of what dependencies their many applications had on technology that might become technically obsolete, thereby putting them at risk.

We did this, and developed a high-level conceptual model, "as-is" architecture and a detailed dependency diagram that revealed many deep and subtle risks to their system.

We were then retained to construct their long-range systems vision and strategic plan. This was the first time we had built an information system plan for a ten-year duration, but this was what was appropriate. They have been working toward this plan, with adjustments as things change, ever since.

*"Semantic Arts were crucial to helping us define and stick to our Service Oriented Architecture plan and implementation. They have been a pleasure to work with and always had our interests and capability foremost in their minds. I wouldn't hesitate to recommend them for any task, particularly those that are design intensive."*

Shelagh Taylor
Deputy Director [CIO]
Washington State Department of Labor & Industries
